The Jurassic Period began about 200 to 165 million years ago. During this Period, dinosaurs coexisted with mammals. Large Sauropods, like the Brachiosaurus thrived in this period. Brachiosaurus were heavy, long-necked, herbivores that walked on four legs.

The Triassic Period dates back to 251 to 200 million years ago. Many dinosaurs in this period were small carnivores. They had hollow bones, walked on their hind legs, and were quick. Herrerasaurus was a dangerous predator in the Triassic Period.

The Cretaceous Period dates from 145 to 65 million years ago. Herbivores, such as Triceratops and Ankylosaurs, lived in this period. They lived in herds to protect themselves from carnivores like the Velociraptor. During the Cretaceous Period, insects started to appear and it was during this period that dinosaurs became extinct.

Herrerasaurus means "Herrera's Lizard." It was small and quick. It had sharp teeth and claws; it was a carnivore and ate plant eating dinosaurs.

Tyrannosaurus rex, a carnivore, was known to hunt herbivores like Triceratops.

Stegosaurus was an herbivore that lived in the same time period as the Brachiosaurus.
